Scenes In Project

Quickly access all your scenes!

List of all available scenes in the project for quick access.
Useful when you have to switch often between scenes in larger projects.

Open "Scenes In Project" window from the menu:
**"Tools/Asset Management/Scenes In Project"**

GitHub | Asset Store | OpenUPM

Features

- List all scenes in project. Pin favourites at the top.
- "►" button per scene to run in play mode directly.
- "+" button per scene to add / remove additively.
- Sort scenes by name, path, date, file size, or just drag them around.
- Scenes are grouped by folder. Groups are separated by little space.
- Customize how scenes are displayed (partial path or just name).
- Color-code scenes by path or name.
- Multiple windows support (they all show the same though).
- Tested on a project with 1k+ scenes.
- Personal VS Project preferences.
  - Personal preferences stored locally in the Library folder.
  - Project preferences to be shared with your team stored in the ProjectSettings folder.
